# FIFTY-SECOND ANNUAL REPORT

OF THE

BOARD OF SUPERINTENDENCE OF THE DUBLIN  
HOSPITALS,

WITH

APPENDICES FOR THE YEAR 1909-10.

---

TO HIS EXCELLENCY THE RIGHT HON. JOHN CAMPBELL,  
EARL OF ABERDEEN, G.C.M.G.,

*Lord Lieutenant General and General Governor of Ireland.*

35 DAWSON STREET,  
28th June, 1910.

MAY IT PLEASE YOUR EXCELLENCY:

We, the Board of Superintendence of the City of Dublin Hospitals, have the honour to submit to Your Excellency this our Fifty-second Annual Report under Statute 19 & 20 Vict., cap. 110, passed on the 29th July, 1856, entitled Dublin Hospitals Regulation Act.

At the outset we have to refer to the changes that have taken place on the Board. We have to announce the death of our late Chairman, Sir Francis Brady, Bart., who for years served regularly and zealously (at first as a member, and later as our Chairman), and whose loss we greatly deplore. His place as Chairman has been filled by the election of Sir John Barry, the senior member of the Board. We have also to announce the appointment, for the first time, of two ladies—Miss Anne M. MacDonnell, R.R.C., and Miss M. McNeill—whose long and practical experience as matrons in the management of hospitals cannot fail to be of great help to us.

During the year ending 31st March, 1910, we have inspected all the Hospitals which receive grants from Parliament.

Viz.:—

1. Westmoreland Lock Hospital.
2. Steevens's Hospital.
3. Meath Hospital and County Dublin Infirmary.
4. Cork Street Fever Hospital.

## 5. The House of Industry Hospitals, viz. :

- a. Hardwicke Fever Hospital.
- b. Whitworth Medical Hospital.
- c. Richmond Surgical Hospital.

## 6. Rotunda Lying-in Hospital.

## 7. Coombe Lying-in Hospital.

## 8. The Royal Victoria Eye and Ear Hospital; and

## 9. Royal Hospital for Incurables, which receives a portion of the Concordatum Fund.

Our inspections were made as heretofore without any previous notifications to the officials of the several Hospitals. On these occasions we carefully observed and inquired into the state and condition of each institution to ascertain that the wards were clean and well ventilated, that every provision was made for the treatment, comfort, and welfare of the patients, and that the several buildings were kept in good repair and in a sanitary condition. We made inquiries respecting the current expenses of each hospital and the system of purchasing, storing, cooking, and issuing supplies; we looked into the nursing arrangements, and into the means available in each hospital for the extinction of an outbreak of fire, and for the escape of the inmates in the event of such an occurrence, and, in fact, into all such matters as might assist us in supervising these hospitals, and in reporting thereon in accordance with the provisions of the 18th section of the Act 19 and 20 Victoria, cap. 110.

In the Appendix we set forth tables which show the work being done by each hospital under the superintendence of the Board. Table No. 1 is a classified return of the diseases of patients treated in each hospital, of the number of patients affected with, and of the number that died of any particular disease during the year under consideration. This return is drawn up according to the nomenclature and classification of the Royal College of Physicians, London, and is that which is in use in the notification of deaths and the compilation of the Registrar-General's returns. The advantages of the regular publication on similar forms of returns founded on a common nomenclature and classification of diseases are plain. It enables one to make a comparison of the work done in hospitals from a medical point of view. Such a comparison is possible, one with another, as regards the hospitals under the supervision of the Board, and it shows results fairly uniform. These results, as far as we can judge from the figures obtainable, are as successful as those of the hospitals of any other city in the United Kingdom. This statement, however, is little more than a surmise, owing to the irregularity and want of uniformity in the publication by hospitals in general of statistics of disease.

What makes us specially desirous to obtain information on data that would put this aspect of the question on sure footing, is that we have before us reliable returns which put the Dublin Hospitals in a leading position as regards economy of management. The following extracts are from the latest edition of "*Burdett's Hospitals and Charities.*"

Name of Hospital.	Daily average number of beds occupied.	Average cost per bed occupied.	Average residence per in-patient treated to a conclusion.
		£	days.
London Hospital, . . . . .	799	138-6	21
Manchester Royal Infirmary, . . . . .	272	73-7	19
Birmingham Queen's Hospital, . . . . .	121	117-5	17
Edinburgh Royal Infirmary, . . . . .	836	71-2	26
Glasgow Royal Infirmary, . . . . .	591	69-6	26
Belfast Royal Victoria Hospital, . . . . .	224	61-3	24
Dublin Meath Hospital, . . . . .	115	56-2	20
FEVER HOSPITALS.			
London Fever Hospital, . . . . .	69	171-2	37
Dublin Cork Street Fever Hospital, . . . . .	153	47-5	23
OPHTHALMIC HOSPITALS.			
Royal London Ophthalmic Hospital, . . . . .	168	115-6	17
Glasgow Eye Infirmary, . . . . .	79	70-3	17
Dublin Royal Victoria Eye and Ear Hospital, . . . . .	82	47-1	22
LYING-IN HOSPITALS.			
Royal Waterloo Hospital, London, . . . . .	52	119-3	33
Dublin Rotunda Lying-in Hospital, . . . . .	91	58-8	11

The average cost per bed in the foregoing return is arrived at by dividing, for each hospital, the average number of beds occupied into the total cost of in-patients, excluding rent, rates, and taxes. The high rents of London have, therefore, nothing to say to the high cost per bed of the Metropolitan Hospitals. Taking these facts into account, and the thoroughly satisfactory way in which the patients in the Dublin hospitals are fed and cared for, it appears to us that these figures reflect the greatest credit on the management of Dublin hospitals. As to the making of the selection of hospitals for comparison it is that of the editor of Burdett's manual. However, a glance at the figures set forth in Table No. 2, page 41 of the Appendix, is all that is necessary to show that the figures of the hospitals selected represent a fair average of all the hospitals under our supervision. In giving consideration to these figures it must be borne in mind that since in-patient and out-patient departments are worked mainly by one staff, it is difficult to apportion the cost of each. As a consequence it has become the custom to ignore the cost of the out-patient departments, and to arrive at the average cost per bed by dividing the average number of beds occupied into the total cost of maintenance and establishment. In the figures set forth in Burdett's returns an allowance is made for the cost of attendance on out-patients, and this will explain the difference between the figures there shown and those in Table 2. In lying-in hospitals, especially, the cost of the out-patient department is very heavy, so much work is done by nurses in the houses of the poor, and we hope next year to be in a position to give figures showing the amount of such work.

In our report last year we briefly contrasted the thoroughness of the work done for in-patients and as compared with that for the out-patients.

As far as we can see, the Boards of the various hospitals under our supervision are as much impressed with this shortcoming as we are; but they lack funds to develop a thorough system. The spectacle described in St. Thomas's Hospital report is still to be seen in Dublin as in London, of worn-out mothers dragging to and from hospitals, week after week, stunted children in rags and variously diseased; and, on each return journey, to some dark, damp basement or other insanitary dwelling, "hugging a large bottle of medicine," gratefully believing that the science and charity of the twentieth century have done all that is possible for them and their offspring. The question is one of great importance to the State. We refer to it, hoping that it may strike the attention of the public as it does ours, and that the funds necessary to establish a better order of things may be forthcoming.

In some of the London hospitals an effort is being made to supplement the bottle of medicine by work done by "Lady Almoners." For instance, the authorities of St. Thomas's Hospital have appointed two such officials with assistants. The chief objects of the social work carried out by this department are—

1. To check the abuse of the Out-Patient Department by patients who are (a) in a position to pay for treatment, (b) too poor to benefit by any assistance other than that obtainable through the Poor Law.
2. To ensure as far as possible that all out-patients to whom treatment is granted shall benefit to the full by that treatment.
3. To act as a connecting link between the Out-Patient Department and outside charities.

The following extract is from the Report, March, 1909—March, 1910, of the Lady Almoner, St. Thomas's Hospital:—

"But inquiry work has led to the discovery of a much larger number of patients who really need help in some form or other if the full benefit of hospital treatment is to be obtained. This help is rarely demanded, nor as a rule is its need recognised at the outset but it is the outcome of friendly inquiries into home circumstances. The worn out mother hugs a large bottle of medicine, trusting implicitly to the belief that it will cure all her troubles, and regards the instructions as to rest, nourishment, etc., that may have been given her by the physician, as so impossible as to be better ignored. The possibility of providing a substitute to do her cleaning, washing, and cooking for a while, has never entered her mind, nor, as a general rule, is it easy to convince her that any such plan could be arranged. The rickety child is dragged to and from the hospital weekly, and the parents ignore the fact that the damp and dark basement in which it lives and sleeps is one of the causes of its condition. Probably the rent is low and arrears have been allowed to accumulate, and when a change is suggested, the proposal is met as impossible. Yet if the skilled care and treatment

afforded by the Hospital is to be of permanent benefit to the child, the home conditions cannot be allowed to remain unaltered. The parents have to be told that they must move, the local relief centres are approached, and asked to help them. Some cases can only be dealt with through the Poor Law, but owing to the experience gained through the past few years' work amongst the out-patients, the possibility of assisting out-patients otherwise than through the Guardians, has steadily increased. Provided that the Hospital can suggest a reasonable plan and that its workers will visit and advise, the charitable agencies are generally quite willing to co-operate in providing the funds. When convalescence is needed, care is taken to provide it; but it is in many cases absolutely useless to send a child away to a Convalescent Home, unless strong measures are taken to improve the home conditions on its return. Late hours at night, street excitements, neglect of personal hygiene, all tend to render ineffectual the good results of a month's convalescence, and the fatal habit of giving a child anything it wants, soon brings it up to hospital again in an unhealthy condition. In connection with the Children's Department, reference must be made to the Children's Act which came into force on April 1st, 1909. This Act can be whole-heartedly welcomed. Many of the wrongs so long regretted can now be remedied, and in the Children's Act the hospital has a powerful weapon to enforce much that has hitherto been impossible."

Since, as we write, we are still in mourning for our late King, it seems fitting to call to mind the great interest which he took in the well-being of hospitals, how he initiated and brought to a successful issue the fund known as "King Edward's Hospital Fund," how the active and personal part which he took in hospital management stimulated many who previously had not regarded such work as being of a kind in which they could usefully employ themselves, and who had not recognised the fact that hospitals, if they are to advance on any but socialistic lines, must depend on the support and good-will of the generation which they serve.

Before proceeding to report on the particular hospitals under our superintendence we think well to put on record the very satisfactory relations that exist between this board and the Boards and authorities of the institutions we inspect. When in our reports we make no mention of things that strike our attention as we go round it is not to be taken for granted that our visits are barren of results, but rather this, that now after fifty-one years of inspection the matters are usually trivial, and, further, that whatever their nature we have never failed by friendly conference to come to an understanding satisfactory to all concerned.

#### ROYAL VICTORIA EYE AND EAR HOSPITAL.

We began our inspections this year by a visit to this hospital. We found it, as we always have, in full and excellent working order. Any citizen who is prompted by a sense of duty to try and take an interest in hospitals cannot do better than make a beginning by paying a visit to this institution. He will come away saying "What splendid work is being done here!"

For the work carried out lends itself to scientific demonstration, and much of it can be understood by anyone with a knowledge of physics. This, because the subjective side of the cases treated does not confuse their condition and their issue to any great extent. In the out-patient department, in which in round numbers 10,000 patients were treated during the year, he will see not only each patient being promptly attended to, but his condition so recorded that if he returns in after years any change that may have occurred can be accurately measured. In the wards he will see comfort, elegance and efficiency combined in a rare degree, and if, in conclusion, he takes the trouble to ascertain at what cost this is done he will find that the economy of management is as distinguished as everything else in the establishment.

The chief changes noted at our inspection were the new out-patient department, fast reaching completion, and the new electric lift, which was working easily without a special attendant, and at a less cost, so we were told, than that on the old hydraulic system,

#### THE COOMBE LYING-IN HOSPITAL.

This institution continues on its upward and beneficent way in the most thickly populated and poorest part of the city. A most thorough inspection caused us to leave, well pleased with the excellence of the results and with the way in which they are achieved. Dirt and disorder are the characteristics of the neighbourhood—cleanliness, regularity and brightness of the wards are the characteristics of the old and rather gloomy building of which we are speaking. On a former occasion we took exception to the rooms of the out-patient department. We are, therefore, glad to report that, notwithstanding a monetary difficulty, a new out-patient building is, as we go to press, fast reaching completion. Should a philanthropist with wealth and imagination come to the city during the summer, we ask him not to leave the district called the Coombe unvisited; and, as he contemplates this locality abounding in dirt and wretchedness, to turn over in his mind what an opportunity this lying-in hospital, which is also a centre for sending out nurses and other medical attendants to look after poor people in their own homes, affords for strengthening the bonds between rich and poor, and for teaching sanitation and domestic economy in a direct and acceptable way. All that is possible in this respect is being done, but the present over-worked staff can do little more than attend to pressing physical necessities.

#### THE MEATH HOSPITAL.

At our inspection we found every department of this hospital in perfect order, working smoothly, efficiently, and yet at high pressure. We went round every ward, we spoke to many of the patients, we inspected the food and the cooking arrangements, we made a most complete inspection, and wherever we went we heard expressions of satisfaction from all. In no hospital is all that science can offer for the alleviation of suffering and

sickness brought more completely within reach of the poor. That this is done economically is plain from the extract we have given from Burdett's Manual and from the returns to be found in the index. It is hard that the Committee should, under these circumstances, be faced with a debt of over £5,000. Men of wide intelligence, a high sense of duty, and an intense desire to do for the sick, who present themselves at or are carried to the hospital, everything that their condition demands, have to answer the question shall we send these sufferers away or shall we go deeper into debt? This is a question which we think well to pass on for the consideration of the citizens of Dublin.

The hospital is one of the oldest in Dublin. It once stood where the Coombe Lying-in Hospital now stands (1771), and its doors are still convenient to and always open to the poor population of the neighbourhood. It is moreover the County of Dublin Infirmary. A glance to the appendix, at the full return furnished by it of the cases treated and the operations performed, shows the work that is being done. We are convinced that anyone taking the trouble to visit this Institution, or to consider the figures set forth in the appendix, will say this work must not be checked, and is well worthy of liberal support.

#### CORK STREET FEVER HOSPITAL.

A casual inspection fails to do justice to this hospital. Most of the buildings and their appointments are old. A great deal of work is done, and that it is done economically and efficiently our returns show. The results bear contrast with those of the most palatial hospitals, the cost per bed is £56 compared with £171 of the London Fever Hospital. A fever hospital differs from an ordinary hospital chiefly in three respects—

1st. All things used by the patients are continually undergoing disinfection and, consequently, they soon lose their new look, and many of them wear out quickly.

2nd. As no infectious cases are refused, a larger staff and equipment is required than in a hospital which may refuse cases.

3rd. As most cases are sent under compulsion by the Public Health Authorities, and as the visits of friends to patients cannot be allowed, it is most necessary that the public should be assured by an independent authority, such as this board, that the treatment of the sick is thoroughly satisfactory.

On the last-named point we can speak with confidence. We made two independent inspections, and, in company with the Medical Superintendent and Matron, looked into every detail, and we found both officials most ready to discuss with us every point we raised, and in no way slow to receive suggestions.

It is a pleasure to us to be able to congratulate Dublin on having such a Fever Hospital. To it every applicant with a high temperature is admitted, and the large amount of work resulting from this liberal rule is done most economically and well. At the same time let not the charitable public think that more could not be done were more funds forthcoming. We think it has a foremost claim on the citizens, and that funds for re-building some parts and renovating others should be forthcoming.

## WESTMORELAND GOVERNMENT LOCK HOSPITAL.

A careful inspection of this institution from garret to basement made us come away fully satisfied with its management. It is unnecessary to go into details. We do not see that it is in the power of medical and domestic science to do more for the patients than is done. Still, as we came away, our feeling partook more of despondency than elation. As regards all Lock Hospitals it must be acknowledged that the good they do in any direction is small compared with what is done by other special hospitals. For since in the British Isles, the cases for which Lock Hospitals exist cannot be sent to them under compulsion by the Public Health Authorities, few sufferers seek admission till age or poverty combined with disease force them to do so. To the difficult problem thus raised no satisfactory answer has yet been forthcoming. Let us hope that one will be found before the twentieth century advances very far.

## THE ROTUNDA LYING-IN HOSPITAL.

In Ireland the birth-rate at present does more than in other countries to keep pace with the effects on the population of emigration and death, and the Rotunda Hospital more than keeps pace with the birth-rate of the poor in its neighbourhood, for patients flock to it, as do students, from far and wide. Its fame is world-wide and goes on growing. At each inspection we find not only that all there is in perfect order, but also that some step forward has been taken. We have so fully entered into details on former occasions that we refrain from doing so now. Like the Coombe Hospital it caters for a very poor neighbourhood, and it does so by an in-patient and an out-patient department. Its results are remarkable and accomplished in a most economical fashion. In considering the figures set forth in our general remarks note that the average residence of in-patients treated to convalescence is only eleven days. It is plain, therefore, that each bed does during the year as much work as it is possible for it to do. Note also how valuable is the work done. Maternity presses hard upon the poor, so hard that in most countries there is a yearly diminishing birth-rate. Surely an institution that does so much to lighten this burden is worthy of all support.

## THE HOUSE OF INDUSTRY HOSPITAL.

We went round this hospital with great pleasure. Our verdict continues to be—An up-to-date hospital in perfect working order. We wish to repeat all that we have said in its praise on previous occasions. The excellence of the intern department is, however, in strong contrast with the state of that for out-patients. The latter has undergone no marked change of late, which is a pity.

## STEEVENS' HOSPITAL.

An inspection of this hospital is a lesson in domestic economy. Old as it is it is still on the upward grade. We found that since

our last inspection a new range has been placed in kitchen, the old chapel has been converted into two new wards. A new chapel has been erected, steam heating has been installed throughout the hospital, a new pathological laboratory is under construction, and the out-patient department shows that a good deal of attention is being bestowed upon it. Surely, under these circumstances, one cannot refrain from congratulating all who have had to do with this institution. May charitable persons note how great has been the outcome of Dr. Stevens' bequest and follow his example.

#### THE ROYAL HOSPITAL FOR INCURABLES.

When other hospitals have done all they can and have failed this institution comes on the scene, and does work that may be called miraculous. For all despondent people we would prescribe a visit to the Hospital for Incurables. We have said something of this sort before, but it cannot be repeated too often. Joyousness in all weathers and under all circumstances is a leading and constant feature of the place. During our inspection we spoke to many of the patients and found that the mental attitude we have referred to was in no way assumed; in one of the corridors we came across Sisters of Charity exchanging greeting with a zealous Presbyterian clergyman, and apparently wishing one another "God speed"; further down the corridor strains of music from the recreation room reached our ears.

Here, certainly, science ministers to the body and something else to the spirit.

Our inspection showed us that the excellent management reported on in previous years tends, if anything, to gain in force.

We have the honour to be

Your Excellency's obedient, faithful servants,

JOHN E. BARRY, Knt., *Chairman.*

JOHN J. THOMPSON,  
Registrar.

No. 15127.

DUBLIN CASTLE.

8th August, 1910.

SIR,

I have to acknowledge the receipt of your letter of the 3rd instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Fifty-second Report of the Board of Superintendence of the Dublin Hospitals.

I am, Sir,

Your obedient Servant.

J. B. DOUGHERTY.

The Secretary,

Board of Superintendence of the Dublin Hospitals.
